

Casing spooler

DA 2001

Main features

- Efficient spooling of natural casings
- Reduction in downtimes
- Gentle spooling to protect natural casings
- Less manual work

The REX DA 2001 is the cost-efficient solution for spooling natural casings onto the linking nozzle. The electric motor starts as soon as you turn the casing spooler towards the linking nozzle. Whether you want to spool sheep, beef or pig casings: all casings are carefully spooled. In addition, two different roller coatings are available in order to prevent damages during the spooling process. This will result in a noticeable increase in your production output and productivity.
