

Dumpling shaper

Main features

- Perfect shaping
- Easy handling
- Simple attachment to the filling machine
- Precise product weights
- Increased productivity

The meatball former as part of the REX Formingline allows a number of different raw materials to be shaped automatically. It is easy to attach to a REX vacuum filling machine without the need for any alterations. Our customary REX quality ensures optimum results reducing the product quality.

Simple attachment to the filling machine

It is easy to attach the REX meatball former, which is mounted on its own wheeled frame, to the outlet of a filling machine. It is electronically controlled through the clipping machine socket on the vacuum filling machine and has its own mains supply.

Best possible portioning precision for cost-effective production.

In the feed system, air is evacuated from the raw material, which is then cut into portions with the highest precision. Shaping heads available in a range of sizes permit the shaping of different sizes and shapes. Adjustments are very easy to make at the dumpling shaper. Output can be increased by fitting a double or triple shaping head.
